

# AXIS ThinWizard™

Manage your Axis ThinServer™  
Products Anywhere on the Network

# D

evice Management Software for all Axis Products

## AXIS ThinWizard — Take control of your network

Use your time and network resources effectively with AXIS ThinWizard, a new device management tool that makes configuration, management and administration of Axis ThinServer products simple and easy. AXIS ThinWizard is your primary remote management assistant for Axis print servers, CD-ROM servers, camera servers and scan servers.

## The ThinWizard advantage

AXIS ThinWizard is a major step forward in the management of all ThinServer products. It is a Web-based device management tool built using Java™ technology. AXIS ThinWizard allows multiple ThinServer products to be viewed and managed in a group or groups using a standard Web browser.

AXIS ThinWizard features many advantages over traditional device management software including:

- Automatic discovery of all Axis products on an IP network
- Flexible grouping of Axis products for viewing and managing as an entity
- Immediate viewing of status updates for Axis products in the network
- Easy-to-use upgrade Wizard for group firmware updates
- Seamless remote management

Via the upgrade Wizard, Axis ThinServer products automatically notify network managers when new firmware is available from Axis. Firmware upgrades are simple — via a Web browser, administrators are able to choose firmware upgrades for one, several or all Axis ThinServer products.

## AXIS ThinWizard makes administration simple and fast

A standard Web browser is the user interface for device management via AXIS ThinWizard. Java technology is used to provide server independence. Standard Web browsers are used to present the management information. Together they provide the user with server and client independence.

## Ideal for any network topology

AXIS ThinWizard supports operating systems including MS Windows NT, MS Windows 98, MS Windows 95, Sun Solaris, IBM/AIX and Linux.

## Management Software

### Easy Remote Management

- Remotely survey, configure and upgrade your Axis ThinServer products
- Via the upgrade Wizard, administrators are informed when new firmware is available from Axis and also when firmware upgrade jobs are complete

### Easy Configuration

- With a simple mouse click you can access the detailed configuration Web pages embedded in all Axis ThinServer products

### Flexible Architecture — Now and for the Future

- AXIS ThinWizard uses Java server side technology
- Remote administration via any standard Web browser

### Freedom to Choose

- Load AXIS ThinWizard software onto a laptop, stand-alone PC, or even a network server
- Supports a wide range of platforms from UNIX to PCs

### Standards-Based

- HTTP access — local area network or remote over the Internet
- FTP and SNMP are used for locating Axis ThinServer products
- Any standard Web browser can be used as the user interface

### Consistent Look and Feel

- User-friendly Web interface saves training and equipment costs

### You Are in Control

- View the status of all Axis ThinServer products
- Know what firmware version is running on all of your Axis ThinServer products and what versions are available from Axis

## Systems Requirements

### AXIS THINWIZARD RUNS ON ANY OF THE FOLLOWING PLATFORMS:

- PC Running Microsoft Windows 95
- PC Running Microsoft Windows 98
- Microsoft Windows NT V4.0 Workstation and Server
- SPARC Sun Solaris 2.5.1 & 2.6
- IBM/AIX
- Linux on Intel platforms

### AXIS THINWIZARD SOFTWARE WORKS WITH THE FOLLOWING AXIS PRODUCTS:

- Print Servers
- Storage Servers
- Scan Servers
- Camera Servers

### MINIMUM WEB BROWSER REQUIREMENTS:

- Netscape Navigator/Communicator 3.0,
- Microsoft Internet Explorer 3.0

### HARD DISK SPACE/MEMORY REQUIREMENTS:

- AXIS ThinWizard software occupies a small footprint of approximately 3.0 MB hard disk space when installed
- Sun Microsystems' Java Virtual Machine 1.1.x or equivalent is required to run AXIS ThinWizard
- AXIS ThinWizard is optimized to run in 64 MB environments

### PROXY SERVER:

- Any W3C HTTP 1.0 compliant
